HAIR REMOVAL. PIGMENTATION. SKIN REJUVENATION. VASCULAR TREATMENT

Intense pulsed light (IPL) is a technology used by cosmetic and medical practitioners to perform various skin treatments for aesthetic and therapeutic purposes, including hair removal, photo-rejuvenation (e.g. the treatment of skin pigmentation, sun damage, and thread veins) as well as to alleviate dermatologic diseases such as acne. IPL shares some similarities with laser treatments, in that they both use light to heat and destroy their targets. But unlike lasers that use a single wavelength (color) of light which typically matches only one chromophore, and hence only one condition, IPL uses a broad spectrum, allows it to be used against several conditions.

OVERVIEW

- TGA registered medical grade equipment
- Fast ROI with perfect results
- Different sized machines to fit in your salon

- Built-in filter handpieces for an easier set up
- Available in hair removal, acne management, skin rejuvenation, epidermal pigmentation or vascular treatment
