## PDT LED Photodynamic Therapy

Photodynamic Therapy(PDT) is a new cosmetic technology frequently used in skincare. It utilizes an LED light source in combination with a photosensitive cosmetic or medicine to treat various skin problems such as acne, rosacea, redness, papules, bumps, and pustules. The photon energy positively affects skin cells and accelerates cell growth improves collagen and elastin generation, promotes micro-blood-circulation, and improves the overall skin condition.

Enjoy the most natural and comfortable PDT-led light therapy machine with high coverage for increased light therapy efficacy. This is light therapy at its best with this product. This PDT-led light therapy machine is a non-surgical facial and skin treatment using light pulses for anti-aging effects. [Welcome to inquire online.](#)
